

## Safety Checklist:

- Are your kitchen, bathroom, garage, basement, and outside outlets GFI protected?
- Do you have smoke detectors that are functional and in the correct areas?
- Are exit signs operable and placed throughout your building?
- Are extension cords a permanent source for electric in your house/business?
- Does your electrical service meet the demands of your appliances?
- Is your outside electric service line cracked or deteriorated?
- Do your lights dim when you run certain appliances?
- Are light bulbs the correct wattage for the fixture?
- Are your hot tub, spa, pool, and electrical service grounded correctly?
- Is your house lightning and surge protected?
- Are your holiday lights safely connected?
- Does your house/business have theft deterrent lighting?
- Are your outlets polarized correctly with wall plates covering them?
- Do you unplug your major appliances (i.e. computer) during lightning storms?

All of the above can provide you safety in your house or place of business from fire, theft, and electrocution. Please review the checklist and let us know if your house or business needs updating.
